

Symposium on Global Cybersecurity Awareness

JUNE 26 - 27, 2019

The Awareness IV Symposium will mediate the exchange of best practices for cybersecurity awareness campaign deployment at the national and transnational levels – and map the frontiers of the electronic threats that are beginning to menace today's user and may well represent the greatest threats to online safety and even human autonomy, far beyond mere retail-customer phishing.

The Awareness symposia's objectives are to establish strategies for the rigorous development and measurement of awareness programs as a form of cybercrime prevention – and to present resources for deployment of national and globalized cybersecurity awareness campaigns to national agencies and NGOs that would curate them.
